Re: BOTTLED WATER

Good Day,

We attach our Certificates of Analysis relevant to a sample marked "Bottled Water", received on 22nd October 2025.

The analytical results indicate that the sample complies with the requirements of SANS 1657:2014. Key parameters of note include:

- Fluoride: 1.0 mg/L – within the permissible limit.
- pH: 9.37 – within the acceptable range of 4.0–9.5.
- Total Dissolved Solids (TDS): 374 mg/L – within aesthetic limits.
- Microbiological quality: E. coli and Total Coliform Bacteria were not detected; Heterotrophic Plate Count is 1 cfu/mL, indicating good microbiological quality.
- Metals and trace elements are within the permissible limits, including aluminium, iron, manganese, zinc and lead.
- Aesthetic parameters such as colour, turbidity, odour, and taste are all within acceptable limits.
- Pesticides: No organochlorine or organophosphorus pesticides were detected.

Overall, the sample meets the requirements for safe bottled water consumption according to the SANS 1657:2014 standard.

Please contact us should you require further clarification, additional testing, or assistance with labelling compliance.

Regards,

N. VAN BINSBERGEN
DIRECTOR
