Re: BOTTLE LABELS

Good Day,

We attach our Certificates of Analysis relevant to a sample marked "Bottle Labels", received on 22nd October 2025.

The results indicate that all tested parameters comply with the SANS 241:2015 limits for drinking water. The waters shows low mineral content with acceptable levels of major ions such as sodium (86.4 mg/l), calcium (21.7 mg/l), and magnesium (3.0 mg/l). The total dissolved solids (TDS) concentration of 380 mg/l falls well within the aesthetic limit of 1200 mg/l, indicating good overall quality.

The pH of 9.44 is within the acceptable operational rang, and the absence of significant metals and nutrients confirms that the water is suitable for bottled water consumption tested and labelling purpose, relevant to parameters measured.

Continuous monitoring should be implemented

Please contact us should you require assistance with label composition or further testing.

Regards,

N. VAN BINSBERGEN
